● PROFESSIONAL SUMMARY

Senior Python Backend, API & Cloud Developer with **9 years of experience** building production-grade backend systems across fintech, cloud infrastructure, environmental technology, e-commerce, and power sectors. Built a monitoring platform for **1,800+ Paytm servers**, automated **GCP backup pipelines for 1,500+ VMs**, and designed APIs for government carbon credit platforms. Core stack: **Python, Flask, FastAPI, REST APIs, PostgreSQL, Docker, GCP, and AWS**, with a strong focus on reliability, automation, and long-term maintainability.

● TECHNICAL SKILLS

LANGUAGES:

Python JavaScript Shell / Bash SQL

FRAMEWORKS:

Flask FastAPI SQLAlchemy Pydantic Behave (BDD) Jinja2 Pandas

BACKEND & APIS:

REST API GraphQL JWT OAuth2 RBAC Gunicorn Uvicorn Swagger / OpenAPI

DATABASES:

PostgreSQL MySQL MariaDB MongoDB Redis SQLite3 DynamoDB SAP HANA Oracle PostGIS

CLOUD:

AWS (EC2, S3, Lambda, RDS, API Gateway) GCP (Compute Engine, Cloud Storage, Cloud Functions) Azure STACKIT IBM Cloud
boto3 / botocore

DEVOPS & CI/CD:

Docker Kubernetes Ansible Jenkins GitHub Actions Nagios OpenNMS Nginx

TESTING & TOOLS:

Pytest Unittest Behave BDD Postman Git / GitHub JIRA Linux (RHEL, CentOS, Ubuntu) Chart.js Leaflet

AI & LLM:

Claude API LangGraph Tool Use Agent Loops OpenAI API YOLOv8 Claude Code GitHub Copilot

● PROFESSIONAL EXPERIENCE

Senior Python Backend & Cloud Developer

NTT Data Business Solutions, Client: SAP Labs India Pvt. Ltd.

Jul 2024 – Present

- Automated backup and restore for 1,500+ GCP VMs with Python (subprocess and GCP CLI), cutting manual overhead by roughly 70%. Built a full Python Behave BDD suite that took coverage from near zero to 90%+ and reduced critical job failures from 15% to 0.2%.
- Owned the GCP VM snapshot lifecycle across 20+ projects and tightened over-broad retention policies, saving roughly \$18K/year in storage costs (a 25% reduction) with no impact on recovery.
- Delivered the complete HANA backint backup/restore solution for STACKIT cloud from scratch, fixed IBM Power Systems trusted-profile authentication across 1,800+ deployments with zero config changes, and built FastAPI internal services consumed daily by 10+ engineering teams.

Senior Python Backend Developer

Iora Ecological Trust, Client: Iora Ecological Solutions Pvt. Ltd.

Oct 2023 – Jun 2024

- Built the SDG Monitoring Dashboard backend for the Assam state government and served as SDG Technical Consultant for Jammu and Kashmir, working directly with government stakeholders.
- Developed the Digital Carbon Toolbox (Python, Flask, PostgreSQL) for carbon emission calculations using Wildlife of India datasets, and led GCP-Portal R&D for India's Ministry of Parivahan Sewa, enabling carbon credit reporting for Reliance and Tata.

Python Backend Developer

Jindal India Thermal Power Ltd. , Client: Amala Earth Private Limited

Feb 2023 – Oct 2023

- Designed and built RESTful APIs in Flask and FastAPI, including a SAP HANA Data Layer API with role-based access control. Set up CI/CD pipelines that cut deployment time by 35%.
- Used Ansible for preventive maintenance and configuration management, turning stressful production deployments into a routine, predictable process.

Senior Software Developer

Infinite Computer Solutions , Client: Nokia Solutions and Networks India Private Limited

Jan 2022 – Feb 2023

- Built custom Python reporting modules for Nokia IMPACT 21/22 enabling real-time SQL query execution. Deployed MariaDB, Oracle, and Nagios via Ansible Playbooks, reducing downtime by 20% and MTTD by 40%.
- Recognised with Best Performer of the Month (Sep 2022) and the Spark Award (Q2 2022) for outstanding delivery and client satisfaction.

Software Developer

One97 Communications Ltd. (Paytm) , Client: Paytm Payment Services Limited

May 2016 – Jan 2022

- Built EGL, an internal monitoring panel tracking 1,800+ production servers via Nagios and OpenNMS. Automated hardware inventory and critical event alerting, contributing to a 30% reduction in production downtime.
- Developed Flask REST APIs for operational dashboards used daily by 200+ engineers and led a codebase modernisation effort that significantly reduced technical debt across legacy Python services.

Network Support Engineer

Accel Frontline Services Ltd. , Client: Timex Group India Limited

Jul 2014 – May 2016

- Handled installation and configuration of network hubs, web servers, and storage servers, maintaining SLA compliance above 95%.
- Automated repetitive reporting tasks with Python scripts, freeing up team time and sparking a lasting interest in automation and backend development.

● KEY PROJECTS

AI Projects - LLM Engineering (Personal) & Plant ID System (Iora)

Python, Flask, Claude API, LangGraph, YOLOv8, OpenAI API, Claude Code, GitHub Copilot

- Built a ground-up LLM engineering system over 1 year - tool use, conversation memory, manual agent loops, and graph-based agents via LangGraph (StateGraph, conditional routing, Pydantic state).
- Built a mobile YOLOv8 plant identification app at Iora. Field researchers photograph a leaf and Flask backend runs inference and returns plant name, count, confidence score, and working time per hour.

STACKIT Cloud HANA Backup, Restore & Log Monitoring - NTT Data / SAP Labs

Python, boto3, botocore, STACKIT IMDS Auth, RefreshableCredentials, S3, SAP HANA

- Delivered end-to-end HANA backup, restore, and listing for STACKIT cloud from scratch (full, differential, incremental, log) across Scale-Up and Scale-Out systems. Fixed silent mid-backup token expiry via botocore RefreshableCredentials and resolved multiple S3 prefix and multipart-limit bugs.

IBM Power Systems Trusted-Profile Auth Fix - NTT Data / SAP Labs

Python, IBM Cloud Metadata API, IBM VPC API, IBM Power Systems SDK, platform.machine()

- Fixed trusted-profile authentication by auto-detecting server architecture at runtime and routing to the correct metadata endpoint transparently across 1,800+ existing deployments with zero config changes.

● EDUCATION & CERTIFICATIONS

PG Diploma in Advanced Computing (PG-DAC)

C-DAC, Delhi, India

2013

B.Tech, Computer Science Engineering

Maharshi Dayanand University (MDU), Haryana, India

2012

- Certified Kubernetes Professional**, Infinite Certified Kubernetes Association
- Cloud Foundations (AWS, GCP and Azure)**, Infinite Cloud Foundation
- Red Hat Certified System Administrator**, RHEL 7 and 8 • **DB2 Database Management and Optimisation**, IBM

● AWARDS & OPEN SOURCE

- Best Performer of the Month, Sep 2022** and **Spark Award, Q2 2022** - Infinite Computer Solutions.
- GitHub Pull Shark Badge** - consistent high-quality open-source contributions. Maintains 18+ public Python repositories covering FastAPI, Flask, GCP automation, and geospatial tooling.
